

Pearson Entry Level in Essential Digital Skills

Past Paper 1

This booklet contains guidance for the assessor for the set task which must take place under supervised conditions.

This booklet is specific to each series.

Assessor Guidance

Instructions for Assessors

Introduction

This document should be read in conjunction with the *Quality Assurance Handbook Essential Digital Skills Entry and Level 1* publication available on the Pearson website.

Contextualisation of task

At Entry Level Centres are permitted to contextualise the tasks to suit their cohorts. Centres may replace the 'BIRTHDAY PARTY' with an alternative party or event, but the following requirements must be met:

The alternative option must have:

- a search for entertainment, e.g. magician, group or singer
- a website with information and images.

Vocabulary associated with the context of the assessment

Tutors/assessors should ensure that learners are prepared in terms of any vocabulary associated with the context of the assessments. In this assessment material, this vocabulary includes:

celebration, complete, decide, displayed, DJ, entered automatically, host, mistake, organise, plan, resave, serve, special offers, stands out, style of music, suffers, reason, reduce, regularly.

Assessment Components

There are three components to the assessment: Task, Question Paper and Observation. All marks awarded for these components should be summarised on the Mark Scheme and Assessment Record for each learner.

The Mark Scheme and Assessment Record

The Assessor must complete the Mark Scheme and Assessment Record for each individual learner, recording summary marks achieved by the learner during the assessment. This may be digital or hard copy.

Preparation for the Assessment Task

The Centre will need provide:

- separate assessment user areas for each learner with a password specific to that learner
- each learner with a separate email account for the assessment
- devices with internet access.

The learner must only have access to the Assessment User area and email account during the Task.

In addition, the Assessor will need access to the learner user areas following the assessment to be able to mark the evidence.

The Assessor will need to create a folder in the User Assessment Area called **BIRTHDAY PARTY** in which to store the relevant datafiles – **HOST EMAIL** and **CAKE ORDER FORM**, which is an editable .html format.

Note: the html form completed in Task 4 may be found in the Downloads folder within the learner's Assessment User Area depending on the default browser settings. It may be advisable for the assessor to verify this by completing a copy of the form prior to scheduling any tests.

The Assessor will need to create a folder in Cloud storage in which to store the relevant datafile – **PARTY INVITATION**. Before the assessment the Assessor must send the link to the datafile via email to each learner taking the assessment.

The Assessor will need to complete the datafile **HOST EMAIL** with suitable centre based email addresses that they may have access to if they need to verify a learner's sent message. A learner will also provide a screenshot in their folder of the email they send. When complete this file should be available to each learner in their Assessment User Area.

The Assessor may choose whether to mark the evidence from digital versions or printed copies.

The Assessor will need to create an individual Mark Scheme and Assessment Record for each learner being assessed.

During the Assessment

In Task 1, learners should be observed accessing the device; however, unless support is requested, it may be assumed that the device has been successfully accessed independently.

Where the Assessor needs to provide support to ensure the learner can access the device; the mark for this element should not be awarded.

Preparation for the Question Paper

Some skill standards will be tested by direct questions. The time allowed for this component is 20 minutes.

The marks for this component should be recorded on the relevant Mark Scheme and transferred to the individual learner's Mark Scheme and Assessment Record.

Preparation for the Observation

Centres must schedule an individual observation session for each learner during the assessment window. The observation element is 20 minutes.

In addition to a computer, it is expected that the Centre will provide a device such as a tablet or mobile phone to support the Observation. The device should have software or an application installed for video calls with at least **one** contact stored in the appropriate software.

Each learner must be provided with their own copy of the Observation Task Booklet.

The Assessor must observe the learner completing the tasks and record the outcomes and

Following completion of the observation, the Assessor should delete the installed app from the device.

Post Assessment

Internal verification of assessment decisions must take place before the evidence is submitted for standards verification.

If a learner does not pass a component, they may resit that component from another set.
